Interview Questions

By Phumelele joyce Mahlangu

What made you pursue what you studying?

Growing up I have always been into gadgets; I remember back in 2012 when I literally begged my mother to buy me a galaxy pocket (Samsung) because I was fascinated by the operating system it used which is Android which by then I had no knowledge that there is such a thing called an Operating System. So basically that was my first interest in gadgets.

What other careers did you consider?

During grade 12 I was considering IT as a career but I knew that I didn't want to fix broken computers and cell phones as a results of that I ended up coming to Wits to study Chemistry but soon I released that I was unhappy I was with the Chemistry degree, so I went back to first year to study mathematical science as I was more interested with number since high school, that's when I learned about computer science.

Is there anything you see yourself doing besides mathematical science?

No, computer science gives me the power to learn many thing, as most of the time in our field we don't know what we are doing, it's timeless learning

Where do you see computer science in the future?

Computer science is the present and the future data is becoming property, the man with data has power and control

- **Who are you?**

I am currently a final year student studying at the University of the Witwatersrand.

- **What are you studying**

Majoring in Mathematics and Computer Science?

- **What do you aspire to do/to be, career wise?**

To be a Research Scientist in the field of Machine Learning

- **What do you love to do on your spare time?**

Listening to music and coding

- **Why would any company take you?**

I have a good understanding of Algorithms, and Machine learning. I have studied more of areas of computer science together with mathematics.
